RAPHAEL GAB-MOMOH

DevOps Engineer · CI/CD & Release Automation · Infrastructure as Code · Fintech

Lagos, Nigeria · Open to 100% remote · rdgabmomoh@gmail.com · raphaelgabmomoh.com · github.com/raphgm · linkedin.com/in/rdgmh

SUMMARY

DevOps engineer with 9+ years building and running production cloud platforms, currently delivering CI/CD and infrastructure for PCI-DSS payment platforms. I design GitHub Actions pipelines with automated tests and release gates, containerise services with Docker, and manage infrastructure as code with Terraform across multi-environment Kubernetes clusters on Azure, AWS and GCP. Strong Linux and networking foundation, incident response and root-cause analysis, and a track record of shipping TypeScript and Python tooling. Open-source contributor to Helm and Minikube; 5-time Microsoft MVP and Microsoft Certified Trainer; comfortable working asynchronously in globally distributed teams.

TECHNICAL SKILLS

CI/CD & release	GitHub Actions, Azure CI/CD pipelines, deployment automation, build workflows, automated test stages, pre-deploy verification checks
Containers	Docker (image builds, container registries), Kubernetes (AKS, EKS, GKE), Helm, containerised microservices
Infrastructure as Code	Terraform (modules, multi-environment state), Bicep; Azure, AWS, GCP
Linux & networking	Linux administration, Bash scripting, debugging and performance troubleshooting, cloud networking
Languages & packages	TypeScript/JavaScript (Node, npm, Vite builds), Python, Go, SQL, YAML/HCL
Reliability & observability	Observability, SLOs, incident management, post-mortems, root-cause analysis
Security & fintech	PCI-DSS, Zero Trust, DevSecOps, secure configuration review, production-readiness reviews

EXPERIENCE

PAYNAUTIK Dec 2025 – Present (full-time from Feb 2026)

Senior DevOps Engineer · enterprise payment platforms

- Build and maintain CI/CD pipelines for containerised payment services, supporting frequent, low-risk releases across multiple environments.
- Architected PCI-DSS-compliant, multi-region Azure Kubernetes Service (AKS) production clusters.
- Write and review Terraform modules and Kubernetes configuration; review infrastructure changes for correctness, security and blast radius before release.
- Implemented automated FinOps policies for Azure Data Lake Storage Gen2 and AKS node autoscaling.
- Contribute to platform and SRE standards for deployment automation, incident response and production readiness.

BAIRNY & CO Sep 2017 – Nov 2025

Cloud Engineer → DevOps & Cloud Architect (three roles: Azure, DevOps, CI/CD and FinOps)

- Designed and ran CI/CD pipelines for containerised enterprise applications on Azure, making deployments repeatable across environments.
- Migrated critical enterprise workloads to Azure PaaS, improving scalability, resilience and reliability.
- Led incident post-mortems and root-cause analysis; defined reliability standards adopted by engineering teams.
- Built internal tooling, reporting and a data warehouse for cloud-consumption visibility.
- Led cost optimisation that cut cloud spend by 20%, with an average 25% monthly reduction.

SKILL.SCH 2025 – Present

Founder & Cloud/DevOps Engineer · skill-sch.com

- Built and operate the SKILL.SCH learning platform (TypeScript/React, Firebase), including its build and release workflow to Firebase Hosting and a Linux web host.
- Added automated pre-deploy verification that blocks a release if the production build fails key checks, preventing bad deployments from shipping.
- Design graded hands-on labs in Linux, Terraform, Docker, Kubernetes and CI/CD, and review learners' code and infrastructure for correctness and practice.

OPEN SOURCE & PROJECTS

Helm (Go): merged pull request into the Kubernetes package manager, reviewed by core maintainers. **Minikube (Go):** merged pull request into the Kubernetes local cluster tool.

Pinpoint Pro (TypeScript): open-source, AI-provider-agnostic workspace built with pull-request-based development and review.

CloudCost CLI (Python): provider-neutral FinOps data platform with Arrow-based pipelines and SQL policies, tested against a real Azure billing export.

Container Doctor, RealCloudProjects: open-source learning tools for containers and cloud projects.

CERTIFICATIONS

Microsoft MVP, Azure, 5 times (2020–2026)
Microsoft Certified Trainer
Azure DevOps Engineer Expert
Azure Solutions Architect Expert
FinOps Certified Professional

EDUCATION

MSc Financial Engineering, WorldQuant University (expected Dec 2026)
BSc Information Systems, Middlesex University (2023)
Diploma, Electronic Engineering, Swinburne University of Technology (2013)

WRITING

Author, *The Ultimate Certified FinOps Practitioner Hands-On Guide*; 30+ hands-on technical articles at raphaelgabmomoh.com.
